

[2016-New Free Downloading 70-486 Exam Dumps PDF From GreatExam (21-40)

GreatExam presents the highest quality of 70-486 exam practice test which helps candidates to pass the 70-486 exams in the first attempt. GreatExam professional tools like questions and answers are extremely reliable source of preparation. When you use GreatExam preparation products your success in the Certification exam is guaranteed. QUESTION 21 Hotspot Question You are developing an ASP.NET MVC application. You need to store membership information in a Microsoft SQL Server database. How should you configure the membership provider? (To answer, select the appropriate options in the answer area.)

```
Work Area
<configuration>
  <connectionStrings>
    <add name="SqlServices"
        connectionString="Data Source=...
        Integrated Security=SS...
    </connectionStrings>
  <system.web>
    <authentication mode="Forms" >
      <forms loginUrl="login.aspx"
        name=".ASPXFORMSAUTH" />
    </authentication>
    <authorization>
      <deny users="?" />
    </authorization>
    <membership defaultProvider="...
      <providers>
        <add
          name="SqlProvider"
            type="System.Web.Security.SqlMembershipProvider"
            type="System.Web.Security.SqlProvider"
            namespace="System.Web.Security.SqlMembershipProvider"
            namespace="System.Web.Security.SqlProvider"
            connectionString="SqlServices"
            connectionStringName="SqlServices"
            applicationName="MyApplication" />
      </providers>
    </membership>
  </system.web>
</configuration>
```

Answer

```
Work Area
<configuration>
  <connectionStrings>
    <add name="SqlServices"
        connectionString="Data Source=localhost;
        Integrated Security=SSPI;Initial Catalog=aspnetdb;" />
  </connectionStrings>
  <system.web>
    <authentication mode="Forms" >
      <forms loginUrl="login.aspx"
        name=".ASPXFORMSAUTH" />
    </authentication>
    <authorization>
      <deny users="?" />
    </authorization>
    <membership defaultProvider="SqlProvider">
      <providers>
        <add
          name="SqlProvider"
            type="System.Web.Security.SqlMembershipProvider"
            type="System.Web.Security.SqlProvider"
            namespace="System.Web.Security.SqlMembershipProvider"
            namespace="System.Web.Security.SqlProvider"
            connectionString="SqlServices"
            connectionStringName="SqlServices"
            applicationName="MyApplication" />
      </providers>
    </membership>
  </system.web>
</configuration>
```

QUESTION 22 You are designing a distributed application. The application must store a small amount of insecure global information that does not change frequently. You need to configure the application to meet the requirements. Which server-side state management option should you use? (Each correct answer presents a complete solution. Choose all that apply.)
A. Application state
B. Session state
C. Database support
D. Profile properties
Answer: AC
Explanation: Both session and profile properties are user specific and cannot be used for global information.
QUESTION 23 You are developing an ASP.NET MVC application. The application is deployed in a web farm and is accessed by many users. The application must handle web server failures gracefully. The servers in the farm must share the short-term state information. You need to persist the application state during the session. What should you implement?
A. ASP.NET session state
B. A local database
C. A state server
D. Profile properties
Answer: C
QUESTION 24 You are developing an ASP.NET MVC application that will be deployed to servers on multiple networks. The application must be compatible with multiple browsers. You must track the page number that the user is viewing in search results. You need to program the location for storing state information. Where should you persist state information?
A. Session
B. QueryString
C. Application
D. TempData
Answer: B
QUESTION 25 Hotspot Question You are developing an ASP.NET MVC web application that enables users to open Microsoft Excel files. The current implementation of the ExcelResult class is as follows

```
public class ExcelResult  
{  
    public  
    public  
    {  
        ...  
    }  
}
```

You need to enable users to open Excel files. You have the following code:

```
var response = context.HttpContext.Response;  
var request = context.HttpContext.Request;  
Target 1  
if (canProcess)  
{  
    response.Clear();  
    Target 2  
    Target 3  
    response.WriteFile(context.HttpContext.Server.MapPath(Path));  
}
```

www.greatexam.com

Which code segments should you include in Target 1, Target 2 and Target 3 to implement the ExecuteResult method? To answer, select the appropriate option or options in the answer area:

Work Area

```
var response = context.HttpContext.Response;  
var request = context.HttpContext.Request;  
  
var canProcess = request.AcceptTypes.Contains("application/vnd.ms-excel");  
var canProcess = request.ContentType.Contains("application/vnd.ms-excel");  
  
if (canProcess)  
{  
    response.Clear();  
  
    response.AddHeader("content-disposition", "attachment; filename=dl");  
    response.Output.Write("content-disposition", "application/vnd.ms-excel");  
  
    response.ContentType = "application/vnd.ms-excel";  
    response.ContentEncoding = new UTF8Encoding  
  
    response.WriteFile(context.HttpContext.Server.MapPath(Path));  
}
```

www.greatexam.com

Answer:

```

Work Area
var response = context.HttpContext.Response;
var request = context.HttpContext.Request;

var canProcess = request.AcceptTypes.Contains("application/vnd.ms-excel");
var canProcess = request.ContentType.Contains("application/vnd.ms-excel");

if (canProcess)
{
    response.Clear();

    response.AddHeader("content-disposition", "attachment; filename=dl");
    response.Output.Write("content-disposition", "application/vnd.ms-excel");

    response.ContentType = "application/vnd.ms-excel";
    response.ContentEncoding = new UTF8Encoding

    response.WriteFile(context.HttpContext.Server.MapPath(Path));
}
    
```

QUESTION 26 You are developing an ASP.NET MVC web application in Visual Studio 2012. The application requires several thousand content files. All content is hosted on the same IIS instance as the application. You detect performance issues when the application starts. You need to resolve the performance issues. What should you do? A. Implement HTTP caching in the ASP.NET MVC controllers. B. Combine the content files by using ASP.NET MVC bundling. C. Install a second IIS instance. D. Move the content to a Windows Azure CDN. Answer: B

QUESTION 27 You are designing an HTML5 website. You need to design the interface such that the content is viewable in all types of browsers, including screen readers. What should you do? (Each correct answer presents a complete solution. Choose all that apply.) A. Ensure that content elements have valid and descriptive names. B. Use Resource Description Framework (RDF) to describe content elements. C. Convert HTML forms to XForms. D. Use HTML5 semantic markup elements. E. Annotate content elements with Accessible Rich Internet Application (ARIA) attributes. Answer: ADE

QUESTION 28 You are developing an ASP.NET MVC application in Visual Studio 2012. The application supports multiple cultures. The application contains three resource files in the Resources directory: - ProductDictionary.resx - ProductDictionary.es.resx - ProductDictionary.fr.resx Each file contains a public resource named Currency with the localized currency symbol. The application is configured to set the culture based on the client browser settings. The application contains a controller with the action defined in the following code segment. (Line numbers are included for reference only.)

```

01 public ActionResult GetProducts()
02 {
03
04     List<ProductModel> products = DataBase.DBAccess.GetProducts()
05     return View(products);
06 }
    
```

www.greatexam.com

You need to set ViewBag.LocalizedCurrency to the localized currency contained in the resource files. Which code segment should you add to the action at line 03? A. ViewBag.LocalizedCurrency = Resources.ProductDictionary.Currency; B.

ViewBag.LocalizedCurrency = HttpContext.GetGlobalResourceObject("ProductDictionary", "Currency", new System.Globalization.CultureInfo("en")); C. ViewBag.LocalizedCurrency =

HttpContext.GetLocalResourceObject("ProductDictionary", "Currency"); D. ViewBag.LocalizedCurrency = HttpContext.GetGlobalResourceObject("ProductDictionary", "Currency"); Answer: A

QUESTION 29 You are developing an ASP.NET MVC application. You need to authenticate clients by using an ASP.NET membership database. Which authentication method should you implement? A. Kerberos B. Forms C. Basic D. Windows Answer: B

QUESTION 30 You are developing an ASP.NET MVC web application that includes the following method

```

public double GoldMined(double currentGold, double newlyMinedGold)
{
    double totalGold = 0.00;
    totalGold = currentGold + newlyMinedGold;
    return totalGold;
}
    
```

www.greatexam.com

You need to test the GoldMined method. Which unit test should you use?

- A. `[TestMethod()]`
`public void GoldMinedTest()`
`{`
`double currentGold = 175.05;`
`double newlyMinedGold = 76.03;`
`double totalGold = 251.08;`
`double result = 0.00;`

`result = GoldMined(currentGold, newlyMinedGold);`
`Assert.IsTrue(totalGold, result);`
`}`
- B. `[TestMethod()]`
`private void GoldMinedTest()`
`{`
`double currentGold = 175.05;`
`double newlyMinedGold = 76.03;`
`double totalGold = 251.08;`
`double result = 0.00;`

`result = GoldMined(currentGold, newlyMinedGold);`
`Assert.AreEqual(totalGold, result);`
`}`
- C. `[UnitTestMethod()]`
`public void GoldMinedTest()`
`{`
`double currentGold = 175.05;`
`double newlyMinedGold = 76.03;`
`double totalGold = 251.08;`
`double result = 0.00;`

`result = GoldMined(currentGold, newlyMinedGold);`
`Assert.AreEqual(totalGold, result);`
`}`
- D. `[TestMethod()]`
`public void GoldMinedTest()`
`{`
`double totalGold = 175.05;`
`double newlyMinedGold = 76.03;`
`double totalGold = 251.08;`
`double result = 0.00;`

`result = GoldMined(currentGold, newlyMinedGold);`
`Assert.AreEqual(totalGold, result);`
`}`

A. Option AB. Option BC. Option CD. Option D Answer: D QUESTION 31 You are employed as a developer at Lead2pass.com. Lead2pass.com has a single Active Directory domain, named Lead2pass.com. You have received instructions to create a new Lead2pass.com website, using HTML5. You have been informed that the interface has to allow for the web page content to be accessible to disabled users. Which of the following actions should you take? A. You should consider including the use of File API attributes. B. You should consider including the use of WebSocket API attributes. C. You should consider including the use of Accessible Rich Internet Application (ARIA) attributes. D. You should consider including the use of Geolocation attributes. E. You should consider including the use of Indexed Database API attributes. Answer: C QUESTION 32 You are employed as a developer at Lead2pass.com. Lead2pass.com has a single Active Directory domain, named Lead2pass.com. You are making use of Visual Studio 2012 to create a new ASP.NET MVC web application for Lead2pass.com. You want to make sure that the new application has access to content files located on the same IIS instance as the application. Subsequent to initializing the application, you find that there are problems relating to the application's performance. Which of the following actions should you take fix the problem? A. You should consider including the use of WebSocket API attributes. B. You should consider making use of ASP.NET MVC bundling to join the content files. C. You should consider including the use of Accessible Rich Internet Application (ARIA) attributes. D. You should consider making use of ASP.NET MVC bundling to separate the content files. Answer: B QUESTION 33 You are employed as a developer at Lead2pass.com. Lead2pass.com has a single Active Directory domain, named Lead2pass.com. You are making use of Visual Studio 2012 to create a new ASP.NET MVC web application for Lead2pass.com. The new application allows for users from various countries to access the application based on their respective cultures. As a result, the application includes various resource files in the Resources directory. These files include a public resource

with localized translation. You are required to make use of a specific WebViewPage property so that the application sets the user's client browser according to the settings. Which of the following actions should you take? A. You should consider making use of the ViewContext property. B. You should consider making use of the Html property. C. You should consider making use of the ViewBag property. D. You should consider making use of the ViewData property. Answer: C

QUESTION 34 You are employed as a developer at Lead2pass.com. Lead2pass.com has a single Active Directory domain, named Lead2pass.com. You have recently developed an ASP.NET application for Lead2pass.com. You are planning to assess the new application by running tests that target the application's business layer. Which of the following actions should you take? A. You should consider making use of a Windows Forms Control. B. You should consider making use of a Coded UI Test Project. C. You should consider making use of a Unit Test Project. D. You should consider making use of a Web Performance and Load Test Performance Project. Answer: C

QUESTION 35 You are employed as a developer at Lead2pass.com. Lead2pass.com has a single Active Directory domain, named Lead2pass.com. You are in the process of creating unit tests that makes use of sealed classes. You want to make sure that dependencies in the unit tests are suitably created, maintained, and injected. You want to configure the use of a suitable isolation method. Which of the following actions should you take? A. You should consider making use of counterfoil type isolation methods. B. You should consider making use of remnant type isolation methods. C. You should consider making use of shim type isolation methods. D. You should consider making use of stump type isolation methods. Answer: C

QUESTION 36 You are employed as a developer at Lead2pass.com. Lead2pass.com has a single Active Directory domain, named Lead2pass.com. You are making use of Visual Studio 2012 to create a new ASP.NET MVC application for Lead2pass.com. Upon initialization of the application, you find that exceptions are thrown and handled. You are required to find out what the state of the application is at the time of the exception being thrown. You should consider selecting Exceptions from the DEBUG menu in Visual Studio 2012. Which of the following actions should you take? (Choose all that apply.) A. You should also consider selecting the User-unhandled check box for Common LanguageRuntime Exceptions option. B. You should also consider selecting the Usehandled check box for Common LanguageRuntime Exceptions option. C. You should also consider de-selecting the User-unhandled check box for Common LanguageRuntime Exceptions option. D. You should also consider de-selecting the Usehandled check box for Common LanguageRuntime Exceptions option. Answer: C

QUESTION 37 You are employed as a developer at Lead2pass.com. Lead2pass.com has a single Active Directory domain, named Lead2pass.com. You are making use of Visual Studio 2012 to create a new ASP.NET MVC application for Lead2pass.com. Lead2pass.com has a web farm that will host the new application. You have been informed that the application should allow for web server failures to be handled without much fuss. Furthermore, state data should be shared between the farm servers. You are preparing to persist the application state during the session. Which of the following actions should you take? A. You should consider making use of a state server. B. You should consider making use of a global catalog server. C. You should consider making use of a file server. D. You should consider making use of a database server. Answer: A

QUESTION 38 You are employed as a developer at Lead2pass.com. Lead2pass.com has a single Active Directory domain, named Lead2pass.com. You are making use of Visual Studio 2012 to create a new ASP.NET MVC application for Lead2pass.com. The application will present data that updates on a regular basis. You have been instructed to make sure that the data is presented in instantaneously. To achieve this, you are required to remove redundant header data, and reduce latency. You also have to transfer information via a full-duplex link. Which of the following actions should you take on the client and the server? A. You should consider making use of Named Pipes protocol. B. You should consider making use of Virtual Interface Adapter (VIA) protocol. C. You should consider making use of WebSockets protocol. D. You should consider making use of TCP/IP protocol. Answer: C

QUESTION 39 You are employed as a developer at Lead2pass.com. Lead2pass.com has a single Active Directory domain, named Lead2pass.com. You have been tasked with developing a distributed application for Lead2pass.com. The application will be installed on the Windows Azure platform, and should allow for the storage of an insignificant number of unprotected global data. You want to configure the use of a server-side state management option that makes use of the NetDataContractSerializer class for session state serialization internally. The option also supports simultaneous access to the same set of session state for multiple readers and a single writer. Which of the following actions should you take? A. You should consider making use of Session state. B. You should consider making use of Windows Azure session state. C. You should consider making use of Control state. D. You should consider making use of View state. Answer: B

QUESTION 40 You are employed as a developer at Lead2pass.com. Lead2pass.com has a single Active Directory domain, named Lead2pass.com. You are making use of Visual Studio 2012 to create a new ASP.NET MVC application for Lead2pass.com. You have configured the application to include pages for Windows Phone 7 users to browse the site. You have been instructed to make sure that the application is updated to allow Windows Phone 7 users to accurately view the modified files. You are required to update a specific method. Which of the following is the method that should be updated? A. The Application.OnLaunched method. B. The Application.Start method. C. The Application.OnFileActivated

method.D. The OnSearchActivated.Start method. Answer: B GreatExam is now here to help you with your 70-486 exam certification problems. Because we are the best 70-486 exam questions training material providing vendor, all of our candidates get through 70-486 exam without any problem. <http://www.greatexam.com/70-486-exam-questions.html>
